In 2012, UNHCR contracted fhi360 to assist with preliminary groundwork to expand the use of ICTs to broaden educational opportunities for refugees. The UNHCR Education Strategy 2012-2016 identified the need to find affordable, innovative solutions to address gaps in current education provision in refugee contexts. However, reliable information about good ICT-educational practice was difficult and time-consuming to source. As a result, UNHCR commissioned fhi360 to create an inventory of current, effective, high quality, cost-efficient ICTs relevant to community and educator needs across the range of contexts in which UNHCR operates.

**ICTs in Education Inventory**

After consults with UNHCR and INEE the ICTs in Education Inventory (thereafter referred to as the Inventory) was created as an interactive tool where humanitarian actors could highlight projects, share experiences, and provide feedback on good practices for ICT integration. The Inventory is built with Drupal 7 CMS, and is designed as an intuitive, user-friendly platform to enable engagement with a range of actors.

The Inventory is populated to provide an initial critical mass of resources, making it a valuable platform for both UNHCR, and a range of other humanitarian actors. In order to increase visibility and use, recommendations were made to house the Inventory within an existing community of practice. INEE was recognized as the ideal location for because of its expansive and actively-engaged community. INEE has displayed interest in hosting the Inventory, and the following recommendations for Inventory’s migration were collaboratively agreed upon.

**Hosting & Content Management**

INEE will host the Inventory within its server and will be the lead organization responsible for the Inventory, assisted by the Technology and Education in Crises (TEC) Task Team who will be responsible for content management. It will be up to the discretion the TEC-Task Team to regulate and filter data posted on the Inventory, at a frequency manageable to them. UNHCR will coordinate the migration with support from fhi360, who will facilitate the site migration, and the preparation of file archives and the MySql database dump.

UNHCR will have minimal involvement beyond the initial migration, but may be invited to comment on management decision through participation in a committee review process. Management decisions must be decided through committee reviews, with representation from INEE and the TEC Task Team.

**Branding & Communication**

INEE, UNHCR, and fhi360’s logos will all appear on the Inventory site, and both INEE and UNHCR will be responsible for promoting and communicating the Inventory within their internal and external networks. During all external promotion, both organizations are to receive recognition for the Inventory. Any significant design changes to the site must be approved through a committee review process, with agreement from INEE’s webmaster.
